SMART Digital Pest Control is an intuitive, digital pest control system that keeps an eye on your business.

AUTOMATED DETECTION OF RODENTS, COCKROACHES & MOTHS

SMART technology in your workplace will monitor pests around the clock. On detection, the device instantly reacts, records and reports activity, using non-toxic methods to trap pests in an environmentally friendly way.

GET INTEGRATED PROTECTION

Combine SMART automation with our regular pest control services for integrated, blanket protection against all major pests.

Welcome to the next generation of pest control - protect your staff, clients, business and infrastructure.

PEST CONTROL THAT WORKS SMARTER

24/7 REMOTE SURVEILLANCE

Most pest solutions rely on quarterly or monthly inspections. SMART monitors constantly, reacting instantly and providing live monitoring **reports**.

NON-TOXIC TRAPS

All SMART traps are 100% non-toxic. Choose an eco-friendly solution for a healthy work environment, and prevent the spread of pesticides.

AVOIDS COSTLY PROBLEMS

A rodent, cockroach or moth infestation costs your business time and money. SMART neutralises the problem before it starts.

DETECT BLIND SPOTS

Rodents excel at hiding in places where they're hard to detect. With SMART and our innovative sensors, we can detect activities in hidden places and relocate traps and or sensors to that specific area.

EASY REPORTING

SMART is an intelligent and HACCP compliant system. Connected to our SMART data hub, we can analyse and react when activity is detected, and export the data you need to present results.

PEACE OF MIND

Constant monitoring minimises the risk of an infestation that could harm your business or your relationship with your customers/partners. Rest assured you have the most efficient rodent, cockroach or moth control available.

HOW IT WORKS

We'll assess your site and devise an optimal solution for your business. If there's already an infestation, we'll neutralise it!

1 We Analyse

WE INSPECT THE SITE

With an approach based on years of industry experience, we inspect, assess and identify risk zones onsite.

WE STUDY AVAILABLE DOCUMENTATION

In addition to a detailed site inspection, we review and analyse available documentation to get a full understanding of your needs.

WE INTERVIEW KEY PERSONS

You and your colleagues know your business best. By interviewing key persons, we gain knowledge that's not necessarily available through documentation.

WE DEFINE THE OPTIMAL SETUP

Every business is unique. We'll use the results of our analysis to design a bespoke solution.

WE SOLVE INFESTATIONS

If we encounter an ongoing infestation during our inspection, we'll take care of it.

2 We Activate

Based on our bespoke plan, we install a system of strategically placed sensors that detect infestations and non-toxic traps that efficiently deal with pests.

The SMART units are connected and constantly report back to our SMART data hub.

LEADING-EDGE TECHNOLOGY

The SMART system is developed by our R&D team at the Flick Innovation Centre. The system and its products harness the latest research and technology, and they're the only ones of their kind.

DESIGNED FOR MULTIPLE PURPOSES

The traps are designed to work inside and outside; above and below ground. They carry state-of-the-art technology, such as connectivity, sensors and solar panels. Accompanying attractants are non-toxic.

COMMON FUNCTIONALITIES

All traps and sensors contain SMART technology that are constantly connected and report activities and catches. All data is gathered in our SMART data hub for further analysis and action.

3 We Monitor & Protect

We're now your eyes and ears in the workplace. We conduct regular inspections, empty and relocate traps when needed, analyse data and provide you with essential information.

If rodent, cockroach or moth activity is detected, we take action.

WE DO PHYSICAL INSPECTIONS

SMART is a powerful system for pest control. However, a system can never replace years of industry experience. That's why we also do physical inspections, so that you can get the best of both worlds: automation and professional expertise.

WE ACT LIKE LIGHTNING

Pest populations often grow at a tremendous speed. So we act faster. By constantly monitoring and instantly reporting, SMART enables swift responses to any infestation risks.

WE EMPTY AND RELOCATE THE TRAPS

When the traps are full, we'll be there to empty them. We also service the units, relocate them if necessary, and make sure that everything is working according to plan.

WE ANALYSE AND PROVIDE INFORMATION

The data provided by SMART, complemented by physical inspections, allows us to continuously analyse your situation. The data can also be exported, in case you need to present your status and process to an external party.

RELAX. WE'VE GOT THIS!

Physical inspections take time. Emptying traps takes time. Solving infestations takes both time and money and worrying about any of the above takes a lot of energy.

NONE OF IT IS AN ISSUE WITH SMART, BECAUSE WE DO IT FOR YOU.

SMART CONNECT

SMART Connect, the system's master unit, receives information from all other SMART units on your site and instantly reports back to our SMART data hub.

The product consists of a single master control box, which connects and controls the SMART units installed on your site. The system creates its own wireless network without interfering with other existing networks at the site.

SMART EYE

SMART Eye is a small sensor that detects and reports movement. Thanks to its small size, it can be placed in narrow spaces typically favoured by rodents.

The product is both a monitoring device and a range extender. However, its primary use is as a monitoring device to detect rodent activity. It's ideal for server rooms, cable runs, electrical cabinets, ceiling and or voids, or other areas that are difficult to inspect.

SMART SENSE

Smart Sense is a sensor that detect insect activity and traps the insects on a glue board. It is for indoor use and can be placed in many different locations depending on whether it is intended for moth or cockroaches.

For cockroach-monitoring, Smart Sense can be placed in various locations where cockroaches usually frequent: Industry kitchens near refrigerators, stoves or inside cabinets etc.

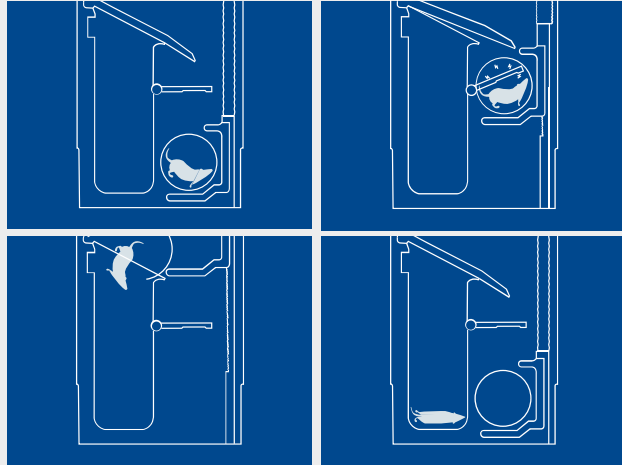

Smart Sense can be wall-mounted for moth-control, where glue boards can be used in combination with pheromone.

Besides detecting insect activity, Smart Sense acts as a range extender for other products in the Smart Connect series.

SMART BOX

SMART Box is a multi-catch unit that deals with rodents above ground. Attractants lure the rodent into the box, exterminating it efficiently and without any use of toxins.

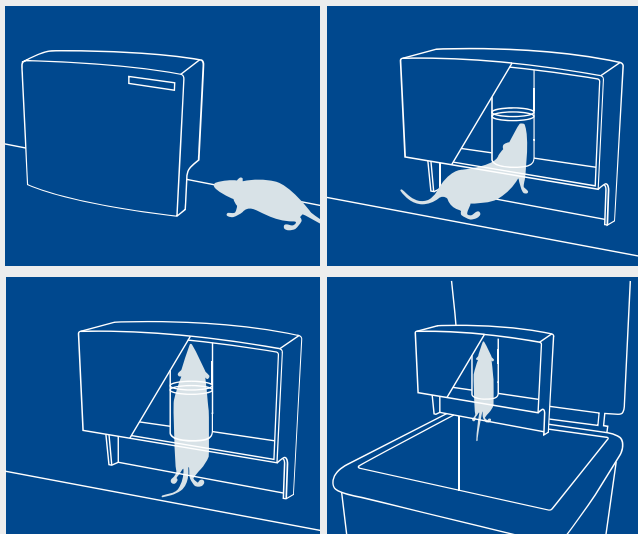

When the rodent enters the trap, sensors detect movement and body heat. A catch function is then activated, euthanising the rodent without the use of toxic bait.

SMART CATCH

SMART Catch is a single catch unit that detects and deals with rodents above ground. Attractants lure the rodent into the trap, exterminating it efficiently and without use of any toxins.

The trap can both catch and euthanise both mice and rats quickly, humanely and efficiently. At the same time, it can detect and monitor any rodent activity in close proximity from the trap.
